Compiler Project1 Report

0516022 吳禹璇

The abilities of my scanner :

    identify the lexical definition of the input file's contents, and also make the correct output format requested.

The platform to run the scanner :

    linux1.cs.nctu.edu.tw

How to run the scanner :

    use "make" command to generate scanner and execute it by the command "./scanner input_file"

```
[yswu0821@linux1 ~]$ make
lex lextemplate.l
gcc -o scanner lex.yy.c -lfl
[yswu0821@linux1 ~]$ ./scanner input1
```
